

Presentation - Media Communication

Prof. Majid

TOPIC: The world is experiencing a dramatic increase in population. This is causing problems not only for poor, undeveloped countries, but also for industrialized and developing nations. Describe some of the problems that overpopulation causes, and suggest at least one possible solution.

By Alexandre Luna.
September 6, 2012

Nowadays the entire world has watched a rapid increase in population. In fact, this trend is causing a lot of problems related to quality of life, use of natural resources and life expectation, mainly in undeveloped countries. Likewise, the problems of overpopulation should be highlighted and suggestions of possible solution must be conducted by society through a broad discussion and commitment. Hence, this presentation will discuss some points of view about this issue.

Firstly, the uncontrolled increase in population naturally can bring competition over the few natural resources in a specific region of the world. However, when this trend can be perceived on a large scale as an international and irreversible process, the problem becomes bigger and globalized. Indeed, undeveloped countries can be considered, by many authors, as the source of this phenomenon, as a result of lack of government policies about the increase in population and the use of natural resources. Meanwhile, specifically about the growth rate of nativity of the population, a sexual education seems one way to reduce this dramatic growth.

On the other hand, the industrialized and developing nations contribute dramatically to the overpopulation in the world. Moreover, even the developed countries, despite criticizing the poor countries, also benefit from the consumption of the population of the undeveloped countries, on this account these poor countries are the large consumers of their products and services. In contrast, the developed nations do not facilitate the progress of developing nations, creating barriers, obstacles and restrictions to the growth and evolution of these societies.

In conclusion, a more egalitarian distribution of income aligned with a global policy of basic education seems the key for minimizing the impact of overpopulation in the world. Meanwhile, it is a complex scenario, because it involves many variables, many cultures and many ways to think about this issue.
